

NotebookLM and Gemini

Slot 2 – 25 June 2026 (Thursday)

The Potential of Artificial Intelligence (AI) in Data & Documentation
Automation

Dr. Muhammad Naufal bin Nordin

NotebookLM vs Gemini — what's the difference?

	NotebookLM	Gemini
Nature	<i>AI grounded on your documents</i>	General generative AI
Strength	Answers + citations	Generates & drafts free-form text
Use for	Query a corpus, summarize documents	Draft memos, draft slides, brainstorm

Why is this relevant to records management?

- You keep many **circulars, memos, guidelines, and procedures**.
- Answering a single question often means *flipping* through many pages.
- With NotebookLM: upload once, **just ask** — answers come with **references to the source**.

Key concepts

- **Grounding** — NotebookLM answers **only** based on the documents you provide, not "general knowledge" that may be inaccurate.
- **Citation** — every answer shows which part of the source it was drawn from, so it can be **verified** before use.

Sensitive Data Warning

DO NOT upload real patient data, confidential circulars, or restricted documents to a personal Google account.

Use **public documents** or documents that have been **de-identified**.
Always comply with departmental information security policy.

3 main workflows

1. **Query a reference corpus** — upload guidelines, ask questions, get answers + citations.
2. **Project paper** → **slides** — turn a project paper into a slide outline.
3. **Meeting audio** → **minutes** — transcribe a recording, draft meeting minutes.

+ Further exploration — Audio Overview, FAQ, Study Guide, Mind Map, drafting memos with Gemini.

What we'll do today

#	Lab	Time
1	Set up a notebook	20 min
2	Workflow 1: Query a corpus	30 min
3	Workflow 2: Project paper → slides	35 min
4	Workflow 3: Audio → minutes	35 min
5	Further exploration	20 min

Training documents: see `public-references.md` (public KKM/JPA links).

Let's begin → Lab 1
